

WEAS Product Technology

(Wireless Explosives Arena Simulator):

The WEAS is a wireless, electronic training device that enables safe and effective training in situations where simulations involving bombs or other explosives are used. The only wireless training system of its kind, the WEAS assists those engaged in training against terror attacks, to safely test reactions to simulated explosions without the inconvenience and hazard of wires or cords.

To activate a simulated explosion, the operator simply presses a button on the remote control, which has been encoded to function on a unique band frequency. This encoding process eliminates the risk of accidental explosions as a result of picking up signals from another device.

Approved and currently in use by the Israeli Special Forces, the WEAS can be applied to any terrain, and causes no damage to the environment. Designed for use with standard training electric flash bang, no licensing for use is required.

Key Benefits:

- ⊕ Eliminates the hazard and inconvenience of wired systems
- ⊕ Can be used in even the most rugged terrain
- ⊕ Units are light and user-friendly (Remote units dimensions: 22.4X8.7X13cm, 8.8X3.4X5.1inch)
- ⊕ Because it uses standard training explosives, no special license is required
- ⊕ Can be used with Romtes' ATSR for comprehensive training regimen

Components Include:

- ⊕ One remote control
- ⊕ Three separate control units
